

Delamode is committed to minimising the impact of its activities on the environment.

The key points of our strategy to achieve this area:

- Minimise waste by evaluating operations and ensuring they are as efficient as possible.
- Minimise toxic emissions through the selection and use of its fleet and the source of its power requirements.
- Actively promote recycling both internally and amongst its customers and suppliers.
- Source and promote a product range to minimise the environmental impact of both production and distribution.
 - *Utilise electric counterbalances forklifts for warehouse operations.*
- Installation of renewable energy sources on warehouse facilities.
 - *Photovoltaic (PV) systems installed at UK warehouse facility*
 - *It is projected that the 2 x 10kw roof mounted panels will save a projected 350 tonnes of CO2 emissions, over a 25 year period.*
- Meet or exceed all the environmental legislation that relates to the company.
- Prioritise equipment and vehicles which minimise carbon emissions (Euro 5 equipment).
